Evotech

Gestione sicura,
semplice e economica

Un depuratore
affidabile e ecologico

Alto rendimento
in spazi contenuti

Safe, simple and economical
management

A reliable and eco-friendly
filter bed

High performance in small
spaces

filtering solutions

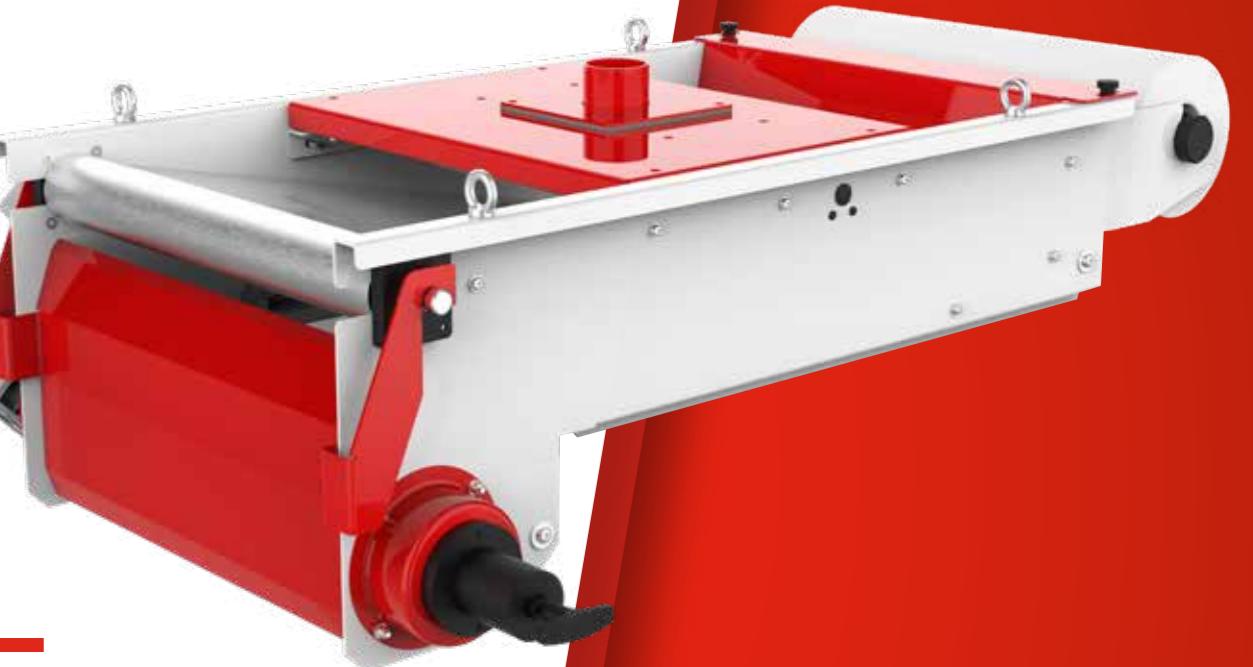

Qui in Micronfilter siamo convinti che creare qualcosa di nuovo sia una responsabilità enorme. Per questo ogni nostro prodotto è progettato, realizzato, testato e venduto nel più assoluto rispetto delle più avanzate regole e leggi locali e internazionali, con particolare attenzione alla salute dei nostri lavoratori, alla protezione dell'ambiente, a politiche produttive sostenibili, basate sui diritti, sull'informazione e sulla trasparenza di ogni nostra azione.

Here at Micronfilter we are profoundly convinced that creating something new is a huge responsibility. This is the reason why each of our products is designed, manufactured, tested and sold in the respect of the most advanced local and international rules and laws, with particular attention to the health of our workers and to the protection of the environment.

Evotech

soluzione economica per la
filtrazione dei lubrorefrigeranti
low-cost solution
for coolant filtration

focus

features

Filtrazione dai 30 ai 60 micron

Filtration from 30 to 60 microns

Portata da 40 a 300 l/min.

Flow rate from 40 to 300 l/min (10-80 gpm)

Riduzione del consumo di media filtrante

Reduced consumption of filter media

Attenzione allo smaltimento dei rifiuti

Care for waste disposal

Schema di funzionamento

Working principles

The contaminated liquid (1) flows and spreads evenly into the filter bed (2). As the fluid flows into the filter it is forced to pass through the filter media by gravity. This process separates the contaminating solids from the liquid and deposits them on the filter media (3), further enhancing the filtration efficiency. When the progressive accumulation of solids clogs the filter media and the liquid can no longer flow through the filter media, the liquid level rises together with the float (4), which activates a proximity switch. The proximity switch activates the gearmotor and the filter media is advanced forward. As the fabric moves forward, a scraper (5) separates the dirty fabric from the sludge and is rewound on the reel (6), thus facilitating the separation of solid waste and reducing disposal costs.

Scegli Micronfilter EVOTECH

I depuratori "Evotech" consentono una gestione semplificata ed economica della filtrazione del lubrorefrigerante all'interno di un'azienda. Sono indicati per tutte le macchine utensili per la lavorazione dei metalli, per la filtrazione di emulsioni e olii intei (aventi una viscosità massima di 20° cSt a 40°C) e per portate che variano da 40 a 300 lt/min in funzione dell'inquinante presente in sospensione, del fluido da processare e del tessuto filtrante desiderato.

About the Micronfilter EVOTECH

"Evotech" filter beds allow for a simple and economical management of coolant filtration inside all metal working companies. They are suitable for all metalworking machine tools, for the filtration of emulsified and neat oils (with a maximum viscosity of 20° cSt at 40°C) and for flow rates varying from 40 to 300 l/min (10 - 80 gpm) depending on the solids present in suspension, the fluid to be processed and the required filtering fabric.
